Chroma-Shift Stickers

The "Wow" Factor

What it is: Handmade, waterproof stickers that change color!

Why it's different: In 2026, "personalization" is the biggest market.

People don't just want a sticker; they want a "magic" one that reflects their style when they go outside or fill their bottle with cold water.

Marketing Strategies (How We Sell)

- The "Hype" Strategy: In 2026, social media is key. We'll create a Reel. "Reveal" video showing the color change
- Limited Drops: We will only release 10 packs per week. This creates Fear Of Missing Out, making everyone want them more.
- The Not a Discount Strategy: We increase the price and then apply the discount and guess what? the discounted price is higher than the marked price!

Total Investment

My Total Investment (Cost Price - CP)

To make a batch of 50 stickers, I had to buy materials: UV-Sticker Paper: 1,000 PKR Ink & Printing: 500 PKR Packaging: 300 PKR Total Cost Price (Total CP): 1,800 PKR for the whole batch.
Cost per Sticker: $1800 \div 50 = 36$ 1800 divided by 50 equals 36 $1800 \div 50 = 36$ PKR.

Total Profit

Total Revenue: $50 \text{ stickers} \times 100 \text{ PKR} = 5,000 \text{ PKR}$.

Total Profit: Total
Revenue — Total Cost
 $5,000 \text{ PKR} - 1,800 \text{ PKR} = 3,200 \text{ PKR}$
Total Profit!

Profit per Sticker: $100 - 36 = 64$
PKR profit on every single sale.

The "No-Loss" Discount Strategy

If a friend asks for a discount, how low can I go without losing money? The price of each sticker is 100PKR and giving 50% discount makes it for 50PKR. Since each sticker costs me 36 PKR to make, my "Break-even" point is 36 PKR. The Rule: I can offer a discount as long as the price stays above 36 PKR. Strategy: If I give a 50% discount, the price becomes 50 PKR. Is it a loss? No! I still make $50 - 36 = 14$ PKR profit per sticker. Maximum Safe Discount: I can give up to a 64% discount before I start losing my own money.

Business genius!

The Scenario:

"I want to sell my stickers fast, so I announce a 'Mega Bundle' deal. You pay 110 PKR and you get 4 stickers."

Ask the class: "Calculate it! Did I just make money, or did I lose money?"

Solution Reveal!!

Total Money Earned (Revenue): 110 PKR
Total Cost for 4 stickers: $4 \times 36 \text{ PKR} = 144$

The Calculation: $110(\text{Earned}) - 144(\text{Cost}) = -34 \text{ PKR}$

The Answer: "It's a LOSS of 34 PKR! So even though the deal looks attractive, this Mega Bundle actually causes a loss of 34 PKR per sale."

Does Anyone Have
A Question?

Thank You :)
